Engineer – Installation & Troubleshooting Software

Department: Technical Services

Location: Mumbai (Thane Office) / Chennai

Job Summary

We are seeking a skilled Engineer with a Mechanical or Production Engineering background. This role involves installation, configuration, and troubleshooting of software integrated with CNC machines. The ideal candidate will have hands-on experience in sheet metal design, CAD/CAM software, and CNC programming.

Key Responsibilities

- Install and troubleshoot software on CNC machines across client sites.
- Support field teams and customers with technical assistance.
- Interpret engineering drawings for accurate programming.
- Develop CNC programs for punching and laser cutting operations.
- Ensure effective networking and software integration across systems.
- Travel extensively as required to support customer sites.

Required Qualifications

- Bachelor's Degree in Mechanical or Production Engineering.
- 2 to 4 years of relevant experience in CNC software applications.
- Proficiency in AutoCAD, SolidWorks, CREO, Radan, and related tools.
- Knowledge of 2D and 3D CAD, and CNC machine operations.

Preferred Skills & Experience

- Experience in sheet metal industry.
- Ability to travel extensively.
- Male and female candidates are welcome.

Soft Skills

- Strong analytical and troubleshooting skills.
- Excellent interpersonal and communication abilities.
- Self-motivated, detail-oriented, and team-focused.

Travel/Other Requirements

Daily travel to customer places; valid driver's license preferred.
